**Read the original text carefully and then paraphrase each paragraph or section in your own words.**

**Passage 1 :** The phenomenon of climate change is intricately linked to human activities, particularly the combustion of fossil fuels and deforestation. These activities release greenhouse gases into the atmosphere, trapping heat and leading to global warming. This rise in temperature, in turn, results in the melting of polar ice caps, rising sea levels, and alterations in weather patterns. The consequences are far-reaching, affecting not only natural habitats but also human societies. Addressing climate change requires a multifaceted approach, encompassing renewable energy adoption, reforestation efforts, and international collaboration.
